

Assignment 3:

Part 1: Read the CSS Review

Part 2: Download [Sublime Text 3](#)

Part 3: Assignment 3 exercise:

Unzip the assignment-3 and save it to your desktop or some other location

In sublime text open up the folder- you can open the entire folder and both the html sheet and the css sheet will come up on the side. Use what you have learned about floating and clearing to make a layout that looks like the following:

The center three divs should have a **float** applied.

You can use percentages to specify the **width** of the divs, and pixel values for the **heights** of the divs; to give the divs a color use the **background-color** property.

Use your reading for guidance.

Open your file in Chrome or another browser to preview it. Every time you save the file it will update. If something is breaking try to use inspect element to fix it.

See next page for the second part of the exercise:

Once you have a layout set up, add some pictures and paragraphs within your divs. You might need to add additional divs as wrappers for more complex stuff.

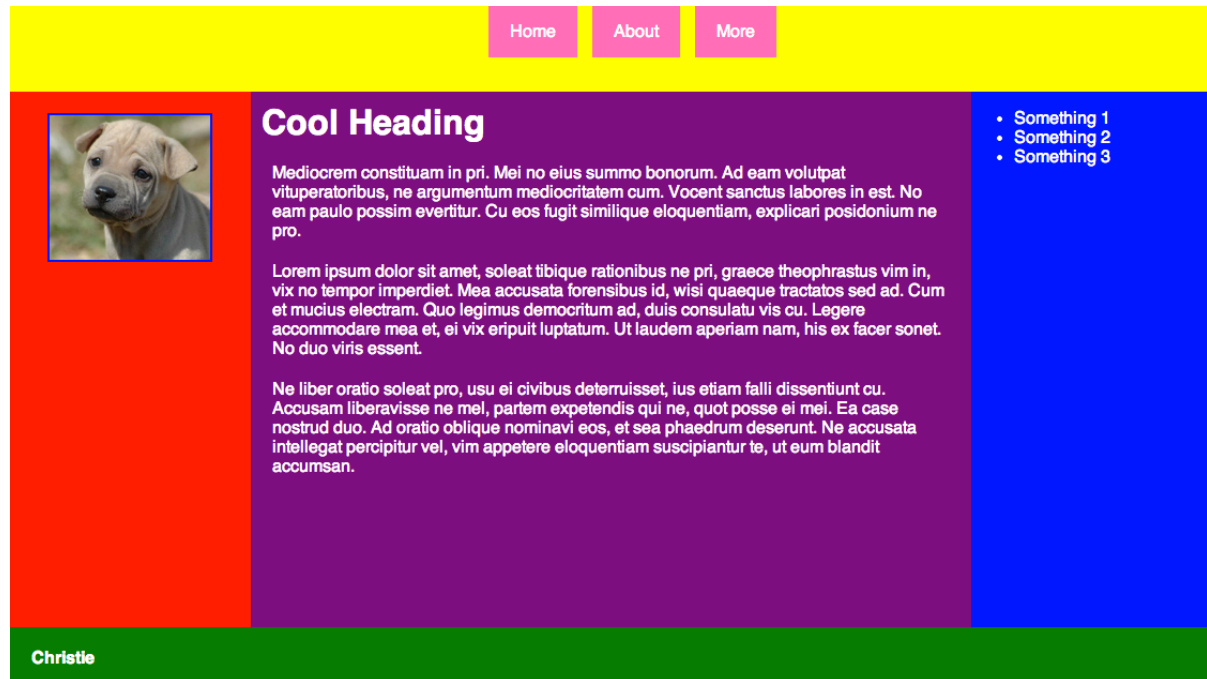

What's most important to me is that you **create a navbar using an unordered list**.

To make this work make sure you style the `` tag to have **list-style:none;** and **text-align:center;** you must also style the `` element to have **display:inline;** or **display:inline-block;**

If you actually want to link in other pages you can put `<a>` tages around your `` tags, but you don't have to. It would be **nice to see at least one external link**.

Other things I want to see: Images, paragraphs, and headings with styling, working inside the layout you created.

Something like this at least:

Here is also a good resource for centering things:

<http://www.w3.org/Style/Examples/007/center.en.html>

After that style it up be sure to use W3C as a resource:

<http://www.w3schools.com/css/default.asp>

http://www.w3schools.com/tags/ref_colorpicker.asp

Kuler is also good for colors.

Once you are done save it and zip it and send it back to me!
